Good News

For Users of Vydec, Lexitron, Xerox, CPT, Lanier, Jacquard, 3M, Micom Data, IBM Word Processors

Make The Bowne Connection and link your word processor directly with a whole range of compatible application software packages.

The Bowne Connection is an exciting new way to *expand* the scope of your in-place hardware. *Enlarge* its text handling abilities into new areas. *Extend* its communication reach by letting it talk with other word processing keyboards, exchanging information, sharing files.

Make The Bowne Connection:

- For photocomposed pages. Or driver tapes.
- For expanded data base management requirements.
- For large search and retrieval operations.
- For electronic information exchange.
- For tracking correspondence.
- For access to proprietary libraries.
- For building a word warehouse.
- For laser imaging.

You already are using one of the finest word processing machines ever built. Bowne and the manufacturer are working together to make it even better. By letting you make The Bowne Connection and use the powerful text software packages.

More Good News

It Really Works. Here's How.

Being able to make The Bowne Connection is one thing. Knowing how to use it, is quite another. Bowne's Cyberway Division solves that problem. It's their job to make The Bowne Connection work for you in the easiest, most beneficial way. Cyberway personnel are skilled at using a variety of word processing keyboards. And experienced in using The Bowne Connection software.

Select one of these Cyberway Programs and start making The Bowne Connection work for you:

Cyberway People, Using Cyberway Equipment.

Cyberway can make The Bowne Connection for you. And implement a complete project from start to finish. For example, Cyberway can take your Vydec or CPT floppy that, for instance, contains text for a new directory. A Cyberway operator, using a Vydec or CPT located at one of the Cyberway centers, makes The Bowne Connection and links into the PhotoComp package to produce fully composed pages, ready for printing. It's as simple as that. Or in the case of a litigation, Cyberway can provide all the people and equipment support needed. Paralegals. Coders. Text inputters. Using its Hendrix Typewriter, Cyberway converts typed text into electronically stored data. Then, Cyberway operators make The Bowne Connection from Lexitron keyboards to link into the KeySearch package for searching the file and retrieving information. Or link into Bowne's Laser Imaging Facility to produce quality output, as many copies as needed.

Cyberway People, Using Your Word Processor.

Cyberway can supply you with skilled word processing operators to make The Bowne Connection from your own word processor.

On a temporary or permanent placement basis. For example, Cyberway can provide you with a Lanier operator skilled in accessing and using the Bowne package for producing personalized letters and tracking responses. Or a Xerox 850 operator trained to use the KeySearch litigation support package. Or a CPT operator to implement The Bowne Connected COMSPEC data bases of construction text.

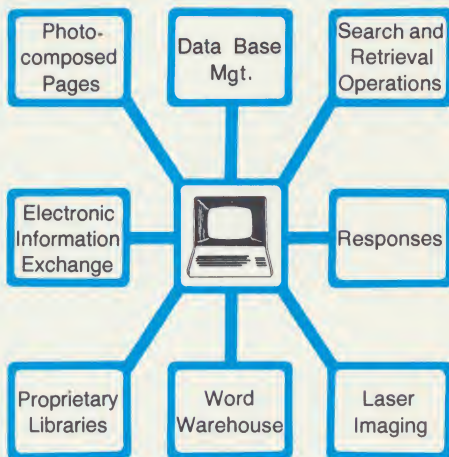

Cyberway Trains Your People to Use Your Equipment.

Cyberway can train your own people to use your word processor to access and use any of The Bowne Connected software packages. And to take advantage of the Bowne-induced compatibility network that lets different word processors talk to each other.

Cyberway Turnkey Services. Cyberway People. Cyberway Applications Training.

If you are intrigued with the idea of making The Bowne Connection and taking advantage of the application packages available thru it, Cyberway has a way to make it work for you.

Call or write today. We will show you how to enhance the investment you already have made in your own in-place hardware, by making The Bowne Connection.
